Comdex Announces a Partnership With SkyPort International for Secure Communications Services

Herndon, VA, January 17, 2007 – Comdex, Inc. announced today that it has formed a strategic partnership with SkyPort International Inc. in which the two companies will jointly provide highly-secure satellite communications services to Comdex's worldwide customers.

Under the terms of the agreement, SkyPort's teleport operations will be part of the Comdex communications package offered to its military, government and enterprise users.

Skyport is a global communications carrier providing broadband satellite and terrestrial communication services from its Network Operations Center and teleport at the highly-secure Ellington Field Joint Reserve Base in Houston. Comdex, based in Herndon, VA, is a growing information technology company focused on providing secure global communications to the Departments of Defense and Homeland Security and to Middle East government agencies.

SkyPort President Roger Klotz said teaming with Comdex will provide important access to new markets for SkyPort.

"Comdex is a rapidly growing communications company with strong government contacts in key areas of the world," said Klotz. "This partnership will enable both companies to provide an enhanced level of service to a new group of customers."

Sean Farazad, CEO of Comdex, said his company is opening an office in the Middle East to better serve clients there, making the SkyPort partnership even more important to Comdex's business in that region of the globe.

“Through this partnership, we can bring our innovative solutions in secure satellite communications to our oil & gas exploration and Department of Defense customers,” Farazad said. “The SkyPort partnership will also allow us to be the provider of the latest generation end-to-end secure satellite communications to clients in Yemen, the Gulf Cooperation Council nations, Libya, Iraq and Egypt.”

About SkyPort International, Inc.

SkyPort is a global communications firm providing managed, secure, broadband satellite and terrestrial communication services. Its clients rely on us to provide end-to-end communication and data solutions that are fast and designed to be 99.999% reliable. Organizations in sectors such as Government, Military, Energy, Enterprise, and many more, depend on SkyPort's carrier class solutions for their critical communications. SkyPort was founded in 1999 and is headquartered in Houston, TX. Its vast network, engineering expertise, and owned infrastructure at Ellington Field Joint Reserve Base enables SkyPort to exceed the security and reliability standards of its growing list of clients.

SkyPort was honored by the World Teleport Association as the fastest-growing teleport operator in 2006.

About Comdex Inc.

Comdex is a global strategy consulting and manufacturing firm in secure communication devices with specialties in building management, secure military communications, tactical war fighting vehicles, oil & gas exploration, and technology consulting. Since 1999, Comdex's team has continued to earn the trust of its customers around the world by providing the leading state-of-the-art technology in mobile wireless products, secure IP/satellite services, communications, biometrics and security. Comdex's and its many innovative technologies, with its deep reservoir-specific expertise and outstanding quality of service in the field of secure communications, allows it to be in the forefront of many customer solutions.
